

Technical Data Sheet

Product

Insect Floor Trap

Code

CQ/TRAP/FLOOR

Description

Multi-species pheromone trap for monitoring purposes that contains sex pheromones and food lure attractants.

Active ingredient: Nature identical pheromones plus food attractants.

Inert ingredient: Plastic casing.

Longevity: 6-12 months dependent on storage.

Packaging: 5 reusable traps + 5 cartridges per box.

Application

Product requires: 1x blue trap and 1x sealed cartridge. Remove aluminium foil from the cartridge. Secure into place under the main body of the trap. Place the trap on the floor in a potential/suspected area of infestation. Examine the trap once a week, or at least once a month. Trap casing is reusable. Cartridge must be changed after 6-8 weeks and/or once full with insects, whichever occurs first.

Trap density: Place 1 Xlure MST trap in each room of suspected infestation. The trap should be placed in close proximity to the food commodity or machinery that is likely to harbour the pest. To reduce the risk of the pest moving between rooms, place one trap near each exit/passage. For larger areas with multiple food sources, traps can be placed 8-10 metres apart from each other and as close to the infested/susceptible food source as possible.

Storage

Store at room temperature in a dry place. Replacement and disposal: Replace the pheromone dispenser cartridge every 6-8 weeks or as recommended by professional pest controller. Remove used cartridges and dispose of away from the monitoring area so as not to interfere with trap activity.

Precautions

Wash hands before and after contact.
Take care when using around small children.
